
Called & Clear

Webinar System — Reference Guide

Everything you need to manage, update, and grow your automated webinar funnel.

1. YOUR LIVE URLS

Bookmark both of these. Share the first; keep the second private.

Registration Page	https://shannonlcrafft.github.io/called-and-clear-webinar-platform/called-and-clear-webinar.html
-------------------	---

Admin Panel	https://shannonlcrafft.github.io/called-and-clear-webinar-platform/webinar-admin.html
-------------	---

Admin Password: **calledandclear**

Tip: To make the short URL work automatically, rename `called-and-clear-webinar.html` to `index.html` in your GitHub repo. Then `https://shannonlcrafft.github.io/called-and-clear-webinar-platform/` will load the registration page directly.

2. YOUR TWO FILES — WHAT THEY DO

called-and-clear-webinar.html — The page your attendees see.

This is the entire 3-screen funnel in one file: Registration → Waiting Room → Webinar Room with live chat, attendee counter, and the offer banner that slides up at your pitch moment. It reads all your settings automatically from the admin when it loads.

webinar-admin.html — Your private control panel.

Password-protected. Change anything — video, colors, text, chat messages, offer copy, time slots, email webhook, analytics — and hit Save. The webinar page picks it up instantly. No re-uploading needed.

3. ADMIN PANEL — SECTION BY SECTION

1 Video

Paste your YouTube video ID (the part after `?v=` in the URL). The video embeds automatically with autoplay when attendees enter the room.

2 Time Slots

Set how many minutes away Slot 1 and Slot 2 appear. Toggle Slots 3 & 4 (Tomorrow 9 AM / 12 PM) on or off. Controls urgency on the registration page.

- 3 Live Chat**
Edit all 28 scripted chat messages — name, second timing, and message text. These fire automatically during the webinar to simulate a live audience.
- 4 Offer & Purchase**
Set your checkout URL, course access URL, offer banner headline, subtext, button text, and when the banner slides up (default: 45 min into the webinar).
- 5 Registration Page**
Edit your main headline, second headline line (last word goes orange italic automatically), subheadline paragraph, promise bullets, and social proof text.
- 6 Waiting Room**
Edit the tips shown to attendees while they wait for their session to start.
- 7 Colors & Theme**
5 one-click preset themes plus full custom control over 8 colors: accent, backgrounds, text, muted text, emphasis, and button text. Live preview updates as you pick.
- 8 Integrations**
Paste your email system webhook URL and Google Analytics ID. Both activate automatically when saved.
- 9 Preview & Tools**
Test any screen instantly without going through the full funnel. Saves settings first, then opens in a new tab.

4. CONNECTING YOUR SYSTEMS

Email Webhook	Your endpoint URL	When someone registers, we POST: { name, email, slot, timestamp, source } as JSON. Paste your system's receiving endpoint in the admin under Registration > Email System Webhook.
Course URL	Your course site URL	After someone pays, your payment system redirects them here. Paste this in Admin > Offer & Purchase > Course Access URL, then copy it into your payment platform's "success page" setting.
Google Analytics	G-XXXXXXXXXX	Paste your GA4 Measurement ID in Admin > Registration > Google Analytics ID. Tracks pageviews, webinar_registration events, and webinar_room_entered events automatically.
Video	YouTube video ID	Upload your recording to YouTube as Unlisted. Copy the video ID from the URL (e.g. dQw4w9WgXcQ) and paste it in Admin > Video. The player embeds with autoplay.

5. HOW TO UPDATE YOUR FILES ON GITHUB

When you receive updated HTML files from your developer, follow these steps:

1 Go to your repo
github.com/ShannonICraft/called-and-clear-webinar-platform

2 Click the file name
Click on called-and-clear-webinar.html or webinar-admin.html

3 Click the pencil icon
Top right of the file view — opens the editor

4 Select all & replace
Ctrl+A to select everything, then paste the new file content

5 Commit changes
Scroll down, click "Commit changes" — your live site updates in about 60 seconds

Your settings are saved in your browser's localStorage — they are NOT inside the HTML files. So updating a file never wipes your admin settings. You can update files anytime without losing anything you've configured.

6. THE FULL ATTENDEE JOURNEY

1 Attendee visits Registration Page
Sees your headline, promise bullets, and 4 time slot options. Fills in name and email.

2 Registers
Name/email is sent to your email system via webhook. Google Analytics logs the registration event.

3 Waiting Room
Countdown timer runs to their selected session time. Tips display while they wait. Enter button activates at zero.

4 Enters Webinar Room
Your YouTube video plays with autoplay. Fake live chat begins firing on schedule. Attendee counter drifts naturally between your set min/max.

5 Offer Banner Appears
At your configured pitch moment, the offer banner slides up with your headline, subtext, and enroll button.

6 Clicks Enroll
Goes to your checkout URL. After payment, your platform redirects to your course access URL.

7. QUICK REFERENCE CHEAT SHEET

WHAT	WHERE / HOW
Change video	Admin > Video > paste YouTube ID

Edit chat messages	Admin > Live Chat > edit any row
Change offer time	Admin > Offer & Purchase > slider
Edit headline	Admin > Registration Page > Headlines
Change colors	Admin > Colors & Theme > pick preset or custom
Add email webhook	Admin > Registration > Email System Webhook URL
Add analytics	Admin > Registration > Google Analytics ID
Preview webinar room	Admin > Preview > Open Webinar Room
Update files	GitHub > click file > pencil icon > paste > commit
Make root URL work	GitHub > rename file to index.html

This guide covers the full Called & Clear webinar system as built. Your two HTML files are self-contained — no servers, subscriptions, or third-party platforms required beyond what you choose to connect. Hosting is free on GitHub Pages.
